

***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the applicant's arguments that the bellows of Schulte do not perform the same function as the bellows of Williams, and therefore one of ordinary skill in the art would not have expected that combining the two references would produce a successful result, are convincing. The bellows of Schulte are used to regulate negative pressure, not to provide negative pressure as in Williams.
2. Applicant's arguments as to the recognition of energy savings are not convincing, because the prior art does not need to recognize the same problem as applicant. The 132 Declaration is not convincing because it is only commensurate with the scope of claims 5, 24, and 25 as the experiment described (pages 5 and 6) was only performed with the reinforced bellows, not a concertina bellows.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
